

Supported Living System

Group home settings provide an intensive, structured milieu for individuals who require a high level of support and assistance on a 24 hour basis. Individuals require moderate to maximum assistance for ADLs and functional mobility. Individuals may require medical interventions and assistance with issues including bowel/bladder routines, skin integrity and swallowing. On average, individuals in this setting receive 1 hour of Physical Therapy, and Psych treatment monthly, and 0.5 hours of Occupational and Speech Therapies monthly. A highly structured routine provides the individual with opportunities to practice the skills necessary to support their continued rehabilitation, functional stability and to participate in a stable activity plan.
