

# Home and Community Services

Home & Community Services provides a continuum of treatment from comprehensive evaluation to intensive rehab. Services are provided in the outpatient clinic as well as in the individual's home, the community and the work setting to support generalization of skills and a meaningful recovery. Treatment specialties include cognitive rehabilitation, neuropsychology, and vestibular treatment. Services are typically provided up to five days a week during business hours; however, based on the individual needs and identified treatment goals, the addition of evening or weekend services may be provided. Clients with LOS <6mths: Avg. 1 OT and 1 SP session/week. Clients with LOS >6mths: Avg. 1 Psych (individual & grp), and 2 BI support staff sessions/week. This client population is 1% of the non-residential clients for Pittsburgh, 28% of the non-residential clients for Paoli, 73% of the non-residential clients for NJ & 17% of the non-residential clients for MD.

 Avg. current age 49 yrs  
 Avg. age at injury 35 yrs  
 Avg. age at admission 46 yrs

## Funding Sources

92% of individuals expressed Satisfaction with Services

### Comprehensive Evaluation:

The Comprehensive Evaluation provides a proactive, coordinated and outcome driven approach targeting cognitive, physical, behavioral and emotional skills and needs. The assessment process includes clinical interviews, medical evaluations, behavioral observations, and standardized assessments designed to evaluate cognitive and physical abilities as well as strengths and weaknesses. Specific recommendations are provided to address referred questions.

### Comprehensive Therapy Program:

The Comprehensive Therapy Program consists of 3-5 days per week of services. The program combines services in the clinic, structured home, and community. Therapies include physical, speech/language and occupational therapies, psychology, neuropsychology, substance abuse counseling and therapeutic recreation. These are delivered through individual therapy, group therapy and the brain injury specialists support implementation of strategies in both the home and community settings. Psychiatry (all programs), and Neuropsychiatry (Paoli & NJ only) are also offered. Services focus on the development of systems and strategies necessary to support medical and mood stability and to maximize optimal participation in life roles in the community and at home.

## Services

### Individual Therapy Services:

Traditional individual therapy services which are offered include: speech/language, occupational therapy, physical therapy, cognitive rehabilitation therapy, substance abuse counseling, neuropsychology, psychology and therapeutic recreation. Often individuals with mild brain injury are referred for individual therapy services targeting vestibular therapy, development of compensatory cognitive strategies, psychology and return to work services.
