

NeuroBehavioral/NeuroRehab System

Louisiana provides a continuum of intensive long-term residential settings that focus on neurobehavioral and medical management, neurocognitive rehabilitation and community re-entry readiness through comprehensive assessment and treatment. The program provides an intensively staffed and structured environment for individuals who demonstrate problematic behaviors of a moderate frequency and moderate to high intensity. Treatment focuses on the utilization of compensatory strategies to manage behavior, increase the individual's awareness, communication and coping skills, and develop a stable activity plan. Services are provided seven days a week, 24-hours a day. Medical issues, functional abilities and behavioral status are assessed and individualized treatment plans are developed. Success in these areas enables clients to move on to more independent settings. On average, NeuroRehab individuals in this setting receive 3 hours of Speech Therapy, 3 hours of Occupational Therapy and 2 hours of Physical Therapy weekly. Therapies are available to NeuroBehavioral individuals as needed. For those receiving therapies, on average they receive 1 hour of Speech Therapy, 1.5 hours of Occupational Therapy and 2 hours of Physical Therapy weekly.

Program Outcomes

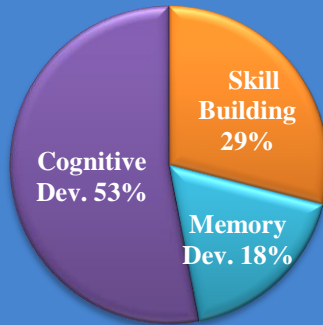

Functional Ratings Outcomes

Ratings measure the % of individuals who achieved their functional, behavioral, vocational and supervision goals.

SRS, 95%

MPAI-4, 80%
